

*Volk Optical is the premier designer and manufacturer of the highest quality ophthalmic lenses. Our patented double aspheric design was used in the industry standard 78D and 90D lenses, still very popular today and has led to an array of lens options for the finest ophthalmic imaging.*

BIO Lenses

*You will be familiar with our 20D and 28D lenses. There are lens power options ranging from 10D to 40D. The newest lenses are our Digital ClearMag (15D) and Digital ClearField (24D) giving higher resolution.*

*Our double aspheric design dramatically improved slit lamp imaging with first the 90D, then the higher magnification 78D. Today, our finest lenses are the Digital Wide Field which provides the widest field views and Digital High Mag for the finest posterior pole details.*

Slit Lamp Lenses

Gonio Lenses

*A variety of options exist in our Gonio lens line: Our 3 mirror lenses for retinal and angle imaging; our four mirror lenses purely for the angle. And our new 6 mirror lens provides true 360° views of the angle. All have no flange/no fluid options for easier application.*

Portable Ophthalmic Camera

*Our latest development is called Pictor - a truly portable solution for ophthalmic imaging. It is modular and can image both the retina (non-mydratic) and external ocular structures. It can take over 1,000 jpg images which can be uploaded to any computer for detailed review, patient records or to share. Great for any mobile situation, for disabled patients, pediatric care and any circumstance where access to a fixed camera may be difficult.*

*Contact Volk for any information on lenses or Pictor. We offer trials of all our lenses and Pictor for 30 days. Tel: 440 942 6161. Email: volk@volk.com. Web: www.volk.com*
